SUMMARY

Full-stack developer who builds **web applications and backend services** from the ground up, with hands-on experience in **REST API design, authentication, database integration, and real-time communication**. Comfortable working across the **React, Node.js, and Python** ecosystem, with experience in **FastAPI** to build and deploy backend services.

EDUCATION

Poornima University, Jaipur, Rajasthan
Bachelor of Technology (B.Tech) in Computer Science and Engineering 2023 – 2027

PROJECTS

Second Brain | *React, TypeScript, Node.js, Express.js, MongoDB* **Live**

- Built a personal platform to **save useful content from across the web** and organize it in one place instead of relying on scattered bookmarks, notes, and saved links.
- Developed features for **searching, tagging, pagination, favorites, and public sharing** to efficiently manage and revisit saved content.
- Implemented secure **authentication and authorization** with httpOnly cookies, refresh-token rotation, rate limiting, and ownership-based access control.
- Used **TanStack Query** for server-state management and data fetching, and **Zustand** for lightweight client-side state management across the application.

Realtime Room Chat | *Node.js, WebSocket, React, TypeScript* **GitHub**

- Developed a **real-time chat application** with room-based messaging using WebSockets.
- Implemented create and join room functionality with temporary in-memory rooms.
- Used **Zod** for message validation and structured WebSocket communication.
- Created a responsive chat UI using React and Tailwind with real-time message updates.

URL Shortener | *Python, FastAPI, PostgreSQL, Pydantic* **GitHub**

- Built a **Python-based URL shortening service** with FastAPI for creating, managing, and resolving shortened URLs.
- Generated **unique short codes** for long URLs and handled redirection by resolving stored codes back to their original URLs.
- Implemented **Pydantic schemas and validation** for structured request handling, with PostgreSQL for persistent URL storage.
- Organized the backend into separate **API, service, and database layers**, with centralized exception handling and consistent responses.

TECHNICAL SKILLS

Languages: C, C++, JavaScript, TypeScript, Python
Frontend: HTML, CSS, Tailwind CSS, React.js, Zustand, TanStack Query
Backend: Node.js, Express.js, FastAPI, REST APIs, JWT, Multer, WebSocket
Database: MongoDB (Mongoose), PostgreSQL
Cloud Media Services: Cloudinary
Tools: Git & GitHub, Postman
